Health and safety information

Routes of exposure	Grinding or heating hardmetal blanks or hardmetal products will produce dust or fumes with dangerous particles that can be inhaled or swallowed, or which might come in contact with the skin or eyes.	Operating the hammer	<ul style="list-style-type: none">— Only operate the controls while the engine is running— Proper PPE must be worn when you are operating the drill rig and the hammer— Before you move the drill rig with the hammer, ensure that no one will be endangered— Do not go close to the edge of a cliff, an excavation or an overhang— Maintain control of the drill rig while you operate the hammer. Operating the equipment beyond its design limits can cause damage to people or equipment— Know the maximum operating dimensions of your drill rig when the hammer is installed— Ensure that there is adequate clearance between the drill rig and any stationary objects when you are manoeuvring the machine— Know the appropriate work site hand signals, and the personnel who are authorized to give these hand signals
Acute toxicity	The dust is toxic by inhalation. Inhalation may cause Irritation and inflammation in the airways. Skin contact can cause irritation and rash. Sensitive people may experience an allergic reaction.	Prohibited use of machinery	The hammer must only be operated by trained professionals. Never allow operation by anyone who is intoxicated, tired or feeling unwell. Use of the hammer in an explosive atmosphere (gasoline fumes, coal dust, etc.) is strictly prohibited.
Chronic toxicity	Repeated inhalation of aerosols containing cobalt may cause obstruction in the airways. Prolonged inhalation of increased concentrations may cause lung fibrosis or lung cancer. Cobalt is a potent skin sensitizer. Repeated or prolonged contact can cause sensitization.	Hammer maintenance	Read through the safety procedures in the operator’s manual before assembling or disassembling the hammer. Always keep the hammer in the correct position to avoid heavy parts which can fall from hammer. Use a proper assembly stand to avoid the falling-over or rolling-over of either the hammer or its parts. Always use tongs with jaws that place a uniform load on the outside diameter of the hammer. Never grip the hammer with pipe wrenches or wrenches that can deform and damage it. Always place tongs on the body of the bit, not on the carbides. Do not apply heat of any kind to the piston case in order to remove the driver sub or the top.
Classification	<p>Following hazard classification according to GHS/CLP applies to the hardmetal powder (3 % ≤ Co < 10 %):</p> <ul style="list-style-type: none">— Acute Inhalation 3, H331: Toxic if inhaled— Carcinogenicity 1B, H350i, May cause cancer by inhalation— Repr. 2, H361f; Suspected of damaging fertility— STOT RE 1, H372: Causes damage to lungs through prolonged or repeated exposure through inhalation— Resp. Sens. 1B, H334 : May cause allergy or asthma symptoms or breathing difficulties if inhaled— Skin Sens.1, H317: May cause an allergic skin reaction.— Aquatic Acute 1, H400: Very toxic to aquatic life— Aquatic Chronic 2, H411: Toxic to aquatic life, with long lasting effects.		
Precautionary statements	<ul style="list-style-type: none">— Do not breathe the dust— Wear protective gloves/protective clothing/eye protection— In case of inadequate ventilation, wear respiratory protection— Avoid release into the environment <p>If inhaled and breathing is difficult, please move exposed person to fresh air and keep at rest in a position comfortable for breathing. If experiencing respiratory symptoms, call emergency center immediately.</p>		

Sandvik Rock Tools: A sustainable choice

Sandvik Rock Tools is committed to contributing to a sustainable world. This commitment is in line with our Sandvik Group sustainability agenda, and we are determined to take action to make the mining industry as sustainable as possible and secure the necessary minerals we need to make the shift towards a sustainable future.

With three clearly defined focus areas for our sustainability work, we embark on this important journey: We Lead the Way, We Build Circularity and We Shift Climate.

Sustainability mission statement

Sandvik Rock Tools has developed a Sustainability Mission Statement. This states that “we should be a forerunner in making the shift to sustainable business in our industry by being an innovative business partner, who delivers sustainable values (people, planet, profit) for all stakeholders in our industry”.

The sustainability mission statement also clarifies how we drive the sustainability progress within our division through the following four areas:

- We are a part of the solution
- We take responsibility for our business impacts
- We optimize our operations
- We are sustainable people

Learn more about our sustainability work and read our full sustainability report online.

Experience the calmness of recycling

Few dispute the fact that we need to change the way we operate to further reduce our impact on the planet. We know that small streams make great rivers – and when working together, we make a difference. With our Rock Tools Recycling Program, we support a secure source of scarce minerals, lower the environmental impact and reduce waste.

Recycling included

Doing the right thing should be easy. That is why our carbide recycling program is now included with all our carbide rock tools. It is completely free – you even get paid for the collected carbide.

Experience the calming effects of recycling, while you know that your worn-out rock tools will be taken care of.

For the future

Carbide rock tools contain tungsten – a scarce and finite mineral expected to run out in 40 to 100 years. With our Recycling Program, we build circularity. It guarantees the production of premium tools that you can use again, and again, and again – today and in the future.

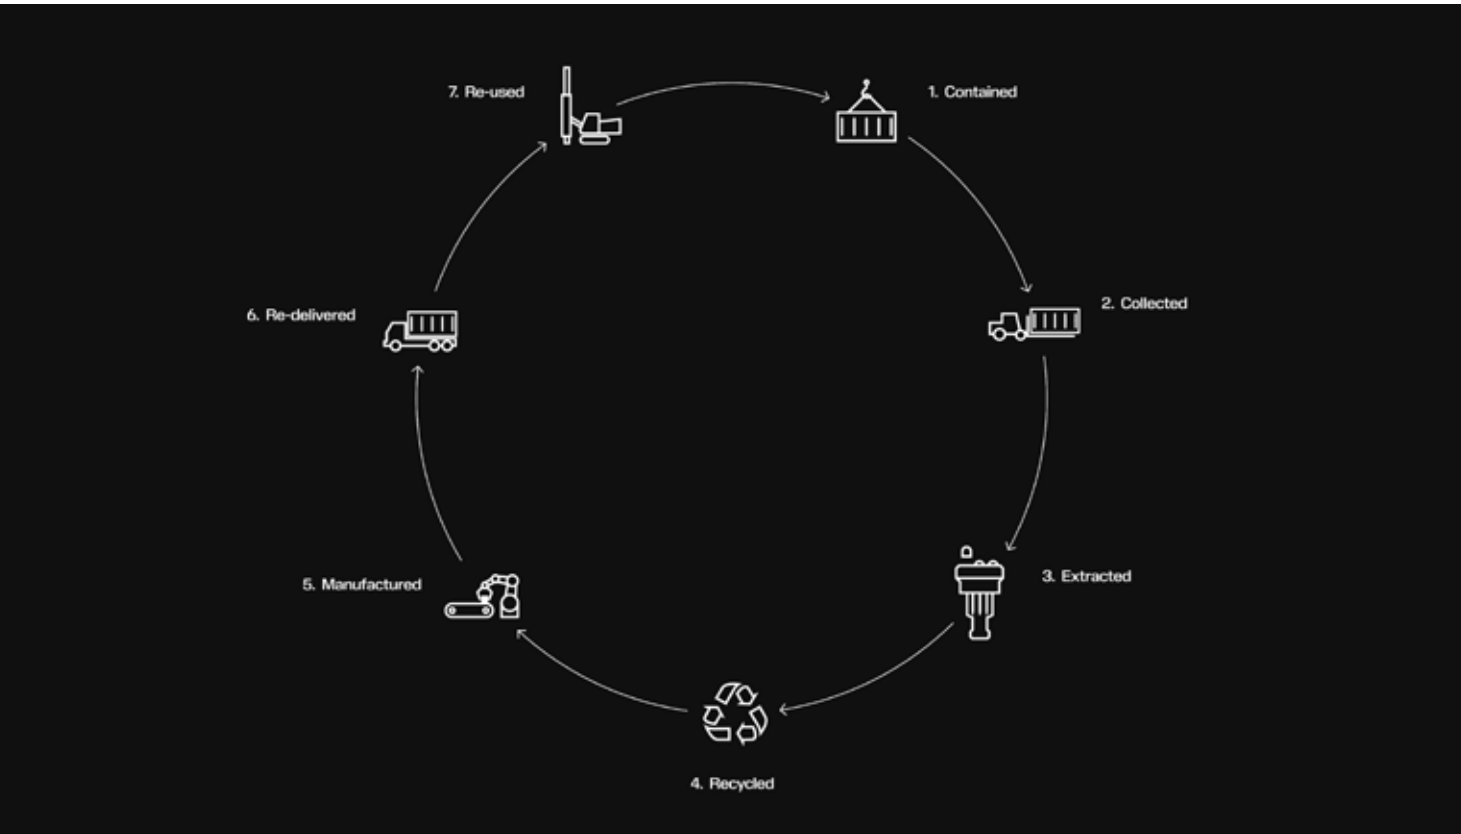

Rock Tools carbide recycling

How does it work?

We provide containers for your site in which you place your worn-out carbide tools. The worn-out tools are regularly collected, and the carbide inserts are removed locally by using our unique local extraction method. The inserts are then transported to our ISO certified factory, where the cemented carbide is recycled and brought back into production of new carbide rock tools.*

This is one important action of making sure that raw materials are used in an efficient and sustainable way, and that our products are recycled when they reach end-of-life.

*Please contact your local Sandvik representative for specific terms and conditions for your local market.

Rock Tools services

Rock Tools Contract Services

Sandvik is a world-leader in the supply of mining and rock excavation tools and equipment. In addition to supplying your operation with the premium brand of rock tools, our range of added services and digital solutions support your drilling operations, everyday – all year round. And we can also take full responsibility for the supply and life cycle management of your tools with our Rock Tools Contract Services. Overall, we do everything we can to ensure you get maximum life, productivity and performance from your rock tools, so that you can achieve the lowest total drilling costs. With Sandvik Rock Tools services, you will never work alone.

Environment, health and safety	Inventory management
Product support	Training/product knowledge
Product optimization	Reporting and data analysis
Contract services	

PowerCarbide®

PowerCarbide® is the gathering of our most powerful carbide grades, representing the very best materials technology we have to offer. The innovative PowerCarbide® grades enable the buttons to retain their shape as long as possible. This ensures longer grinding intervals, fewer bit changes and improved safety.

DP® 55 Grade

SH69 Grade

XT48 Grade

Dual Property® grades

Dual Property® 55, also called DP® 55, has wear resistance similar to our standard grades but offers greater toughness. It is especially suited to large ballistic inserts, accommodating the higher loads the insert may be exposed to due to a longer protrusion.

Self-hardening grades

SH69 is a grade with homogeneous properties throughout the material. It is “self-hardening” as it has the ability to become both more wear resistant and tougher as drilling progresses.

The hardness of the insert surface continuously increases during drilling, which means that the hard top never wears off. The self-hardening effect is greatest in hard and competent ground.

XT grades

XT48 is our standard cemented carbide grade for most drilling conditions. It should be your first choice, especially when drilling in rock that is not fully known. Spherical XT48 inserts are optimized to withstand high load and wear.

Proper care means maximized uptime

Lubrication

It is extremely important that you provide the DTH hammer with a constant supply of good quality rock drill oil. This provides an air seal to reduce friction and prevent galling, when one hammer part is moving relative to another. Galling is a phenomenon that occurs when two pieces of metal rub against each other in the absence of a lubricant film between them. The excessive friction between these rubbing parts generates heat, which changes the properties of the metal, and which will consequently cause cracks in and breakage of the parts. This, therefore, leads to the loss of valuable production time.

Always make sure that you use the right rock drill oil for the climate and operating conditions at the work site.

Corrosion

Corrosion can, in a simplified way, be defined as the destructive attack on metal through interaction with its environment.

Most environments encountered while drilling are considered to be corrosive, to a greater or lesser degree, to the metal parts of hammers and bits. For example, the fatigue strength of a steel part could be reduced by 100 times in the presence of ordinary tap water. The most devastating type of corrosion encountered in hammers and bits is corrosion pitting, where an extremely localized chemical attack results in holes in the metal. Pitting acts as a stress-raiser, which initiates cracking. Many cracks emanating from these stress sites eventually join together to form a single crack front, which ultimately results in failure of the component through corrosion fatigue.

You can prevent corrosion failures by having a protective barrier between the bit and hammer components, and the environment. This is achieved through proper and diligent use of readily available protective materials, such as rock drill oils and thread lubricants.

Only the best is good enough

For efficient Down-The-Hole (DTH) drilling, you need high performing drilling tools. Tools that increase your productivity and sustainability, while reducing your total operation cost and emissions. Within Sandvik, we offer one of the widest range of DTH hammers and bits on the market – because we want you to have best possible outcome of your DTH drilling.

Choosing the right DTH tools for your specific needs and conditions can be a challenge, but we are here to support you every step of the way. In our extensive DTH range, you find a suitable solution for all ground conditions, and with our knowledge and experience, we guide you through to optimal accuracy and penetration.

Malleo™ RH570

Malleo™ RH570 hammer is the fastest in the industry. The optimized design and energy efficiency supports a lower fuel consumption and reduces the environmental footprint, while still ensuring enhanced durability, minimized downtime and consistent drilling performance.

RH560

The RH560 DTH hammer is a robust and reliable addition to your mining and long-hole production drilling operations. It drills fast and lowers your drilling cost per hole.

RH510

The RH510 hammer, with a ported piston and no foot valve, brings high penetration rates and consistent productivity to your operations.

RH460

The RH460 DTH hammer, with its business standard QL/QLX shank and foot valve, is a reliable and productive hammer that ensures a job well done.

Drilling speed makes all the difference

Malleo™ RH570 DTH hammer addresses the growing demand for higher productivity, greater reliability and increased sustainability in your daily operations. Experience the difference by the highest rate of penetration and more drillmeters acheived per hour, while still ensuring enhanced durability, minimized downtime and consistent performance.

Malleo™ RH570 hammer is equipped with boosted internal components, including a completely re-imagined bit shank, for higher load resistance and to perfectly match the increased

power of today’s drill rig compressors. Consistency by fewer interruptions and less troubleshooting ensure minimal downtime, improved on-site safety and less time spent in front of the rig. The optimized energy efficiency of the hammer also supports a lower fuel consumption and reduces the environmental footprint, which makes it an essential drilling tool for a sustainable mining future.

Reach your drilling targets, extract more ore in less time, and finalize the job quicker, while reducing your drilling economy and still improving both safety and sustainability.

A trusted productivity enhancer

The RH560 hammer is a solid and trusted DTH hammer, tailored for higher drilling efficiency and reduced overall costs in surface mining and long-hole production drilling operations. By increased penetration rates, as well as reduced air usage and fuel consumption, this hammer is engineered to support your energy output per piston blow.

The RH560 hammer is designed with an industry-standard shank, no foot valve, a robust piston and a V-lock system to prevent component movement. It incorporates a seamless airflow to mitigate the risk of disruptive and costly break-downs, and that results in improved efficiency and reduced energy usage.

Additional value to most drilling applications

Engineered to withstand operating pressures of up to 24 bar (350 psi), the RH510 hammer is a testament to reliability and efficiency. With the absence of a foot valve in the bit, downtime is significantly reduced, and your operations can continue uninterrupted. Its innovative design prioritizes energy efficiency, fuel savings, and overall cost-control.

Key features of the RH510 hammer include:

- Foot valve-less bit shank
- High-performance capabilities
- Streamlined and user-friendly design for ease of operations
- Simplified servicing procedures
- Mirror impact concept

Reliable performance with a solid design

The Sandvik RH460 hammer series is meticulously refined and holds a well-established reputation for its solid reliability, performance, and productivity across diverse ground conditions. Engineered to operate at 24 bar (350 psi), these hammers are capable of drilling in any direction.

- Key features include:
- Utilization of industry-standard shank
 - superior reliability
 - Enhanced air cycle optimization

Invest in long-term drilling capacity

All drill bits are fitted with our PowerCarbide® or cemented carbide inserts, which provide you with superior life and drilling productivity.

Drill bit bodies make use of precision hardened steel and compound curve body designs to maximize cutting efficiency and cuttings removal. Each bit is uniquely designed to maximize penetration and increase flushing. The Sandvik DTH button bit designs are well known and extensively used around the world. The bits in our new range have an optimized bit head, with maximized steel support for the cemented carbide buttons, face grooves for excellent flushing and an aggressive cutting structure.

Optimized head design
Long wear life, and optimal balance between wear and energy transmission.

Ballistic or spherical buttons in different carbide grades
Allows you to make the best choice for different rock conditions.

Optimized cutting structure
Gives good penetration and bit life in all rock formations.

High-tech drill pipes for smooth drilling

We offer a line of drill pipes which provides you with a great degree of compatibility between rigs and tools.

Cold-drawn seamless tubing material, N80, is used to ensure straightness, thickness and high strength. This gives a smoother drilling process and, consequently, a longer service life. The material also provides a smooth, fine surface that eliminates the risk of hammer failures caused by scaling. Furthermore, the tool joints are made out of micro alloy steel and are case-hardened for superior thread life.

Cold-drawn seamless tubing material

- Superior straightness
- High strength
- Uniform pipe wall thickness
- Less weight

Friction-welded end pieces

- High-strength, 100 % metal-to-metal joint with parent metal properties
- Low-temperature process, gives a small HAZ (heat affected zone) that reduces the risk of failure

Heavy-duty tool joints

- Made of micro alloy steel
- Case-hardened for extra strength
- Offer superior thread life

The right drill string for all your needs	102
Sandvik drill pipes	104
Sandvik RP550 shock absorber	106
Reduce the impact of your drilling	107

The right drill string for all your needs

Engineered for efficiency

Our DTH drill string products and services maximize productivity and minimize operating costs. Longer tool service life means less downtime for you.

High performance for application excellence

Our high-performance drill string components withstand extreme torsional and axial loads, efficiently handling the hard rock and abrasive formations in surface mines.

We offer:

- Extensive in-house engineering expertise
- Leading technology and intellectual property developments
- State-of-the-art manufacturing with premium quality materials
- Certified quality process with rigorous product testing
- Efficient and reliable delivery times
- A thorough understanding of drilling and applications

High quality assurance standards

Our Quality Assurance program is committed to maintaining the highest standards in our manufacturing process, delivering only superior products.

- Stringent material specifications and verification
- Welding process control and ultrasonic weld inspection
- Precise pipe straightness specifications and verification
- Thorough inspections and product testing by highly skilled product specialists
- Raw material traceability

Materials and reliability testing

Our engineers are industry-leading materials experts who excel in the science of maximizing product reliability at materials and reliability labs in key locations around the world.

Sandvik RP550 shock absorber

Reduce the impact of your drilling

With Sandvik RP550 shock absorber, your Rotary or Down-The-Hole drilling tools will have longer service life, lower cost per meter and - thanks to the new design features - greatly improved safety.

The shock absorber plays a crucial role in your drilling operations. By reducing shock and vibration, it saves the drill rigs rotary head, enhances performance and provides a much smoother drilling operation.

Maximum value and improved safety

- Absorbs shock up to 85%
- Floating cushion for vibration reduction
- Reduce damage to rotary head, rig and drilling tools
- Evens out pressure on the drill bit
- Full seal and maintenance free – no greasing during operation
- Longer service life and fewer tool changes for safer handling
- Better CPM and overall drilling economy compared to drilling without shock absorber

Accessories

Sandvik has recently developed and manufactured a comprehensive range of accessories to further increase safety.

Products and tools for safe and efficient work	110
Sandvik rock drill performance fluids	114

Products and tools for safe and efficient work

In order to best facilitate service and enable you to work efficient and safely, we supply many products and tools which work perfectly with our hammers. These accessories include Hammer lifting bails, foot valve assembly and disassembly tools, and a comprehensive hammer service kit. Our range of accessories optimizes your safety and productivity, and also reduces down-time, giving you better reliability.

Sandvik rock drill performance fluids

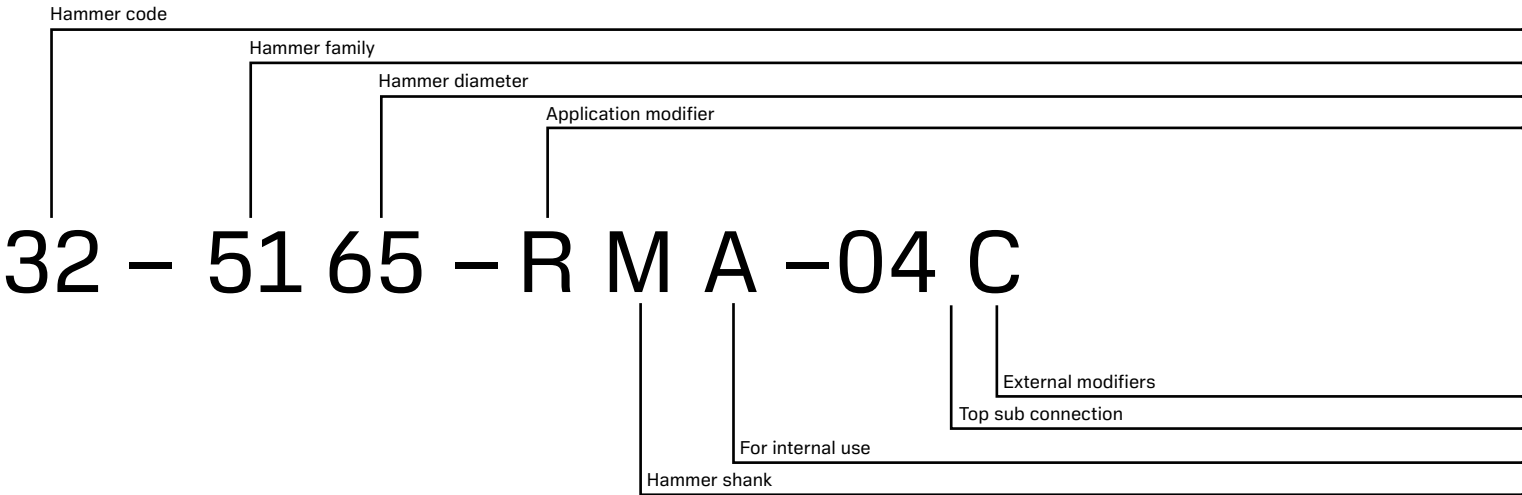

Sandvik heavy-duty rock drill lubrication oils are specially engineered for your Sandvik rock tools that operate under harsh mining conditions. With different viscosity classes for colder and warmer climates, this oil will increase the service life of your rock tools and maximize your return on investment.

Sandvik rock drill performance fluids heavy-duty shank lubrication oil			
Product name	Viscosity grade	Item number	Size
